Multimedia Speakers

Project:

MM2000 Multimedia Speaker System

Objective:

To design a multimedia speaker system, including components and accessories, that complements Level 9's existing products.

Design Process:

Form & Colour Development
Product Graphics Development
Promotional Product Rendering

Tools:

Sketching Tools
2d Illustration Software
3d CAD Software

Solution:

The MM2000 is a 5-speaker surround-sound system designed to accommodate Level 9's existing desktop speaker. New components include a sub woofer, surround-sound control module, adjustable desk and floor stands. The controller and stands are compatible with other systems offered by Level 9. We also created a molded identity badge for use throughout the product line. We successfully integrated our designs into their product line by working closely with their engineering and production staff.
